***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance. The instant invention is directed to first and second heating resistor elements for heating ink supplied to a bubble jet printhead. Further, when the second heating element for heating the ink is measured to be less than or equal to a predetermined level, the second heating element is caused to short circuit. Further, the ink volume detecting circuit connected to the second heating element operates based on a condition of the second heating element.

While Cornell (US006575563B1) teach a similar invention, Cornell teaches providing a power density per unit volume of each heat resistor in order to provide a sufficient velocity to ejected ink droplets and for optimal printing. Cornell falls short of measuring the remaining volume of ink based on a condition of a second heating resistor, as claimed. Further, Cornell does not disclose short circuiting a second heating element when, based on a detected condition, the volume of ink measured is less than or equal to a predetermined level.

An exhaustive updated search has proven to find no other relevant prior art to teach the claimed combination, as recited. Hence, the claims are deemed to be allowable over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
